

## ZELLA

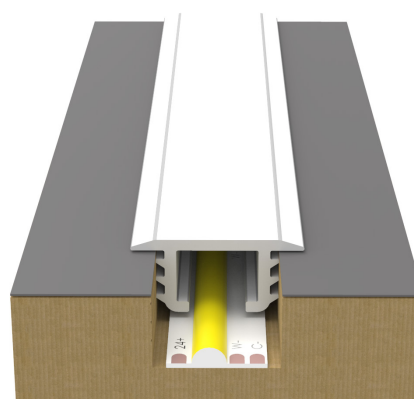

Zella, is an innovative new profile solution that provides linear lighting for recessed applications. Unlike conventional profiles that have a base and a cover, Zella, has been designed to combine both parts into one, and instead of sticking the LED flexible strip to the Aluminium base section, it clamps the strip to the bottom of the routed channel instead.

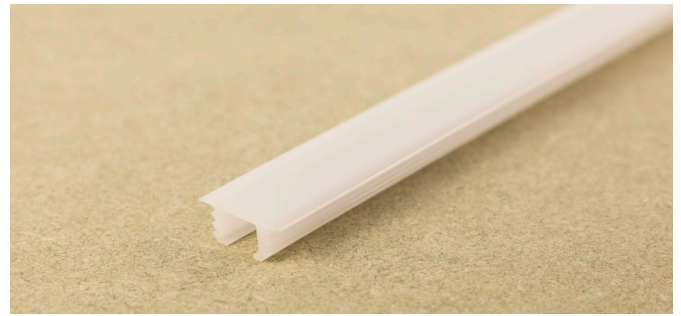

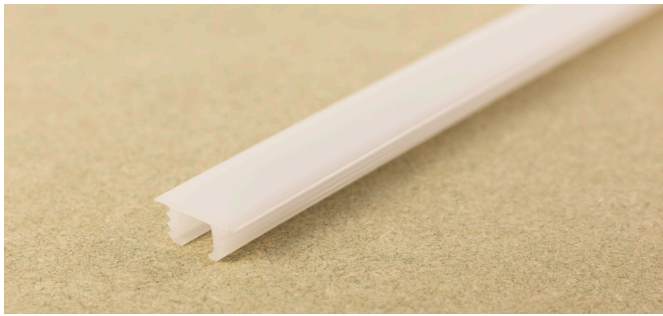

Combining both parts into one plastic body means that the side walls are much more flexible than a traditional Aluminium profile, which will significantly reduce the risk of the profile being too tight for the channel during installation.

BENEFITS	
• Simplified process for installing the LED flexible strip	
• The risk of the profile not fitting into the groove is significantly reduced	
• 5 year guarantee	

TECHNICAL SPECIFICATION	
Material	Polycarbonate
Flexible Strip Compatibility	Any strips that have an 8mm width and above

KEY FEATURES	
• Simplified profile - base and cover have been merged into one solution	
• Plastic side walls pin the flexible strip to the bottom of the channel	
• Plastic side walls offer greater flexibility for installation
